

Ceramic Membrane Filtration System

Skid-mounted device (Ceramic Membrane Filtration System) effectively allocates and stores machine for process and modular systems in the field of solid-liquid separation. A CMF skid-mounted device is designed by order and fully optimized as process flow, which includes CMF unit, power part, control part and supporting pipelines, valves and instruments. The device can be designed as a containerized device.

OVER VIEW OF CMS SKID- MOUNTED DEVICE

Manufacturing skid systems—large and small—is our specialty

The skid-mounted device effectively allocates and stores machine for process and modular systems in the field of solid-liquid separation. A CMF skid-mounted device is designed by order and fully optimized as a process flow, which includes the CMF unit, power part, the control part and supporting pipelines, valves, and instruments. The device can be designed as a containerized device.

This type of device assembly offers many advantages over conventional on-site construction. With built-in flexibility for customer installation, we equip this device to your specific requirements. This device benefits from high-quality work with less site disruption. We design and fabricate across the full spectrum of different applications to meet the distinctly specialized needs of the industries and companies we serve.

Advanced technology applied with real-world expertise

Our highly qualified engineers and draftsmen are not only masters of advanced technology, but they also have the real-world expertise to apply it for maximum effectiveness.

- We use state-of-the-art CAD software packages to transpose your requirements into a cost-effective design.
- We meet your most stringent specifications.

Industry and application-specific solutions

JIUWU HI-TECH is a professional ceramic membrane supplier and has provided skid systems for the food& beverage, chemical industries, as well as skid-mounted systems used in the waste & water treatment industry. We have added considerable capacity in this area in anticipation of increased demand. We provide complete and mature process technology and device to ensure the stability, reliability, and advancement of the processing process. We also offer CMF skid-mounted device to ensure lower energy consumption and higher quality in industrial production.

ADVANTAGE OF CMS SKID- MOUNTED DEVICE

- Low overall investment costs
- Easy installation & relocation
- Short delivery time through an integrated fast track execution
- Reduced on-site erection and hook-up time
- Manufacturing under workshop conditions (fast, clean and reliable)
- Qualification test prior to delivery
- Total responsibility in one hand, thus fewer interfaces for you to handle
- Modular, integration, Intelligentization, short process, long service life
